FAT LOSS FOUNDATION

The 12-Week Training Program

The goal of this program is sustainable fat loss through structured training, improved conditioning, and consistent habits. Consistency is the most important factor — the results come from showing up and putting in the work week after week.

WEEKLY TRAINING SPLIT

MONDAY — LOWER BODY STRENGTH + CONDITIONING

WEDNESDAY — UPPER BODY STRENGTH + CONDITIONING

FRIDAY — FULL BODY STRENGTH + METABOLIC TRAINING

SATURDAY (OPTIONAL) — CARDIO / CONDITIONING

HOW TO READ THE WORKOUTS

- ◆ Exercises are written as: Exercise — Sets x Reps. Example: Goblet Squat — 3 x 10 means 3 sets of 10 repetitions.
- ◆ A superset means two exercises done back-to-back with no rest in between, then rest after both are done.
- ◆ A circuit means a series of exercises done one after another, then rest, then repeat.
- ◆ Strength exercises: rest 60–90 seconds. Conditioning circuits: rest as little as possible while maintaining good form.

PROGRAM PROGRESSION

Each week aim to: increase weight slightly, improve conditioning pace, and complete workouts consistently. Fat loss is driven by nutrition and training consistency.

CHOOSING WEIGHT

Select a weight that is challenging but still allows you to complete the prescribed repetitions with proper form. A good rule: the last 2 reps should feel difficult, and you should still maintain good technique.

Every exercise in this program has a video demonstration in the Exercise Library inside your member area. Check your form any time.
