HANNAH'S 10 FAT LOSS RULES

Tape them to your bathroom mirror

01 Consistency beats perfection.

You don't need perfect workouts or perfect nutrition. You need consistency over time. Small efforts repeated daily create the biggest changes.

02 Fat loss comes from a calorie deficit.

No workout, supplement, or diet trend replaces the fundamental rule: your body must burn more calories than it consumes.

03 Prioritize protein.

Protein helps preserve muscle, supports recovery, and keeps you feeling full while dieting.

04 Strength train while losing fat.

Strength training helps maintain lean muscle and improves the way your body looks as you lose weight.

05 Cardio is a tool, not a punishment.

Cardio supports fat loss and heart health, but it should complement strength training, not replace it.

06 Focus on whole, nutrient-dense foods.

Build most of your meals around lean proteins, vegetables, fruits, whole grains, and healthy fats.

07 Sleep and recovery matter.

Poor sleep can increase hunger, decrease recovery, and make fat loss more difficult.

08 Manage hunger intelligently.

Eat balanced meals, stay hydrated, and choose foods that keep you full instead of constantly restricting yourself.

09 Progress takes time.

Healthy fat loss is gradual. Be patient and trust the process.

10 Show up even when motivation isn't there.

Motivation comes and goes. Discipline and routine are what produce real results.
