

CHOOSING YOUR WEIGHT & SUBSTITUTIONS

Progression rules + equipment swaps

HOW TO CHOOSE THE RIGHT WEIGHT

- ◆ The last 2–3 repetitions of each set should feel challenging, but you should still complete them with proper form.
- ◆ If you finish a set and feel like you could easily do many more reps — the weight is too light.
- ◆ If you cannot complete the prescribed reps with good form — the weight is too heavy.
- ◆ If an exercise calls for 3 x 10, choose a weight that allows about 8–10 challenging repetitions.
- ◆ Beginner tip: start lighter and learn the movement first. Proper technique always comes before heavier weight.

WHEN TO INCREASE WEIGHT

- ◆ You complete all sets and repetitions comfortably.
- ◆ The final repetitions no longer feel challenging.
- ◆ You maintain good form throughout the movement.
- ◆ When increasing, start small — you can always add more. Small increases over time create significant strength gains.

EXERCISE SUBSTITUTIONS

IF YOU CAN'T DO...	SUBSTITUTE...
Back Squat	Goblet Squat
Goblet Squat	Leg Press
Barbell Deadlift	Dumbbell Deadlift
Romanian Deadlift	Kettlebell Deadlift
Bench Press	Dumbbell Bench Press
Pushups	Incline Pushups
Pull Ups	Lat Pulldowns
Seated Row	Dumbbell Row

CARDIO OPTIONS

- ◆ Treadmill · Bike · Row machine · Stair climber · Outdoor running or walking. The exact machine matters less than maintaining effort and consistency.
