

CALORIE & MACRO SETUP WORKSHEET

Hannah's method — find your numbers

STEP 1 — FIND YOUR MAINTENANCE

- ◆ Your maintenance is the number of calories your body burns daily doing everything: basic functions (breathing, digestion, temperature), daily movement, and exercise.
- ◆ Find it one of two ways: use a calorie calculator app (MyFitnessPal or Cronometer), OR track what you eat for a few days while your weight stays stable.

My maintenance calories: _____

STEP 2 — SET YOUR TARGET

- ◆ Fat Loss: set calories slightly BELOW maintenance. Fat loss occurs when your body burns more calories than it consumes over time — a calorie deficit.
- ◆ Lean Muscle: set calories in a SMALL surplus — slightly more than your body burns. The surplus should be controlled and moderate. Don't go crazy.
- ◆ Fighter Conditioning: fuel performance. No extreme dieting — provide your body the nutrients and calories needed to perform at a high level.

My goal: ☐ Fat Loss ☐ Lean Muscle ☐ Performance

My daily calorie target: _____

STEP 3 – SET YOUR MACROS (HANNAH'S GUIDELINES)

- ◆ Protein: HIGH — supports muscle retention, recovery, and keeps you full. Include a quality protein source in each meal.
- ◆ Carbohydrates: MODERATE — energy for training. Eat your heavier-carb meals in the morning and before your workout.
- ◆ Fats: MODERATE — hormone health and satiety.
- ◆ For fat loss: consider sleeping on low carb — make the last meal of the day protein and vegetables.

Protein target: _____

Carb target: _____

Fat target: _____

STEP 4 – TRACK AND ADJUST

- ◆ Track calories with an app for at least the first few weeks — it builds awareness. You don't have to track forever.
- ◆ Weight stalls? Review intake, add a morning walk, add 1–2 steady-state conditioning sessions, be patient. Small adjustments are usually enough.
